

INTRO TO HACKATHONS

01 SERVING THE WEB

1.

WHAT'S THE PLAN?

SCHEDULE

3

- » Serving The Web Today!
- » Front End Thursday 1 March
- » APIs Thursday 8 March
- » Deployment Thursday 15 March

All at 6pm in Computer Room 4, The Diamond

- » Hackathon project over the 4 weeks
- » Using Node.js, Express, Pug, Bootstrap and more
- » It involves dog GIFs...

We will be using Glitch (a bit like Codio), so you don't need to install anything. It runs Node.js

bit.ly/glitch-hs-18

Open this link in two tabs: one will stay the same as my copy,
the other you can edit freely

- » These workshops are open to all abilities
- » If you don't understand anything, ask away!
- » These workshops are all about learning
- » Slides will be made available

Enough waffle, let's get started!

2.

WHAT'S A SERVER?

Something that serves something.

GREG IVES, 2018

SERVER DIAGRAM

9

c253c6c3.ngrok.io

When you open this link, your computer is making a request
to my computer for our dog GIF website

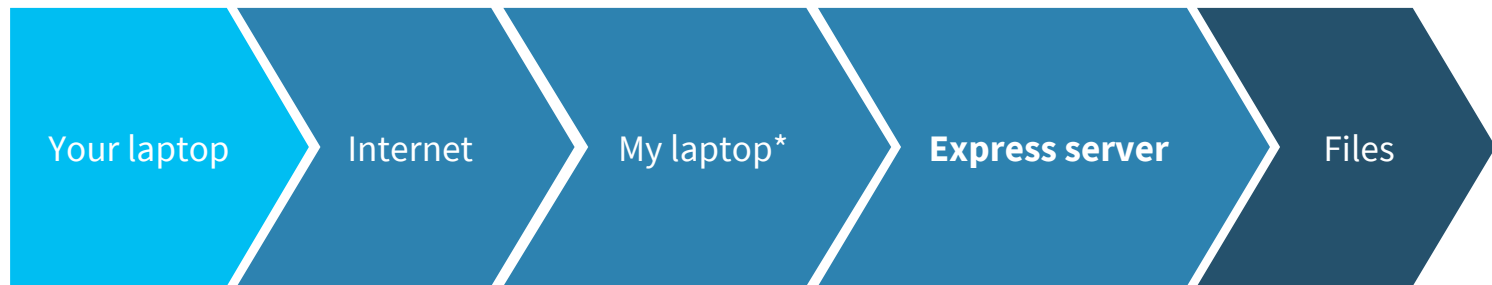

Your browser sends a HTTP request, usually:

- » A GET request which retrieves information
- » A POST request which sends information

There is also HEAD, PUT, DELETE, CONNECT, OPTIONS and TRACE.

The server will send back a response code:

- » 1xx is informational
- » 2xx is success (200 OK)
- » 3xx is redirection
- » 4xx is a client error (403 Forbidden, 404 Not Found)
- » 5xx is a server error (500 Internal Server Error)

What we're going to make

*Sometimes referred to as a server

3.

WHAT'S NODE.JS?

- » JavaScript is usually run solely in a browser
 - » Called client-side
- » Node.js allows JavaScript to be run on your computer (e.g. in a CLI/terminal)
 - » This is server-side
- » Node.js is a JavaScript runtime environment

NPM is a repository for JavaScript ‘packages’:

- » Libraries such as Bootstrap
- » Frameworks such as Express

But how do we use these packages?

To install a package from NPM, you can type

```
» npm install package-name
```

Or if you have a package.json file, just type

```
» npm install
```

Open this link in two tabs: one will stay the same as my copy,
the other you can edit freely

4.

WHAT'S PUG?

HTML is a markup language

» `Click me!`

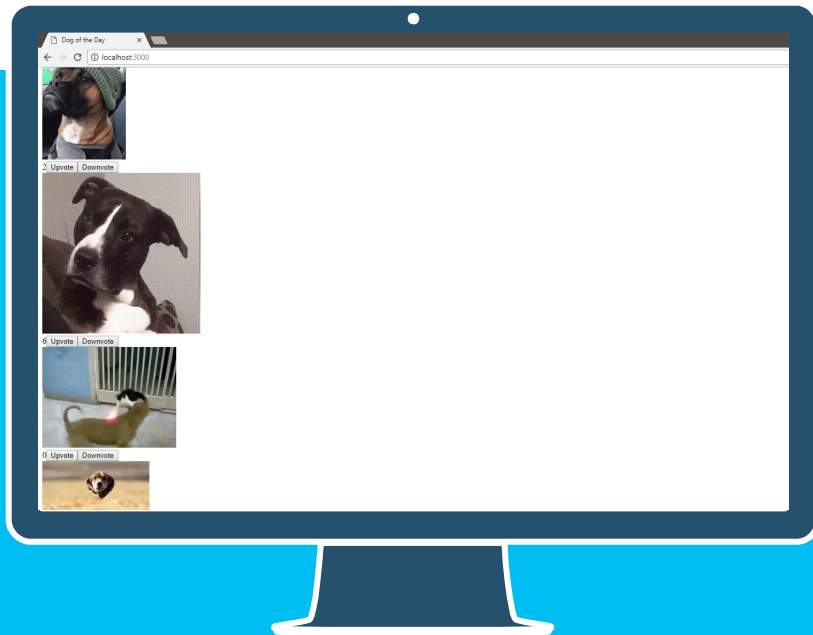

Pug is another markup language

» `a(href='http://link') Click me!`

- » No angle brackets `<>` `</>`
- » Attributes (e.g. href, src, data-attr) in brackets
- » Space separates tag and content
- » We can write inline JavaScript in a Pug file!
- » Lots more...

**THAT'S ALL FOR
TODAY!**

We have a working GIF
voting website.

THANKS FOR LISTENING!
